SENIOR DATA ANALYST

PROFESSIONAL SUMMARY

Senior Data Project Analyst and Data Scientist with extensive expertise in designing data models, developing advanced analytical solutions, and transforming complex datasets into actionable business intelligence. Recognized for building scalable dashboards and reporting frameworks that improve insight visibility and support clear decision-making across technical and nontechnical teams. Highly skilled in applying SQL, Python, R, and Power BI to create robust, data-driven solutions that optimize reporting accuracy, analytical logic, and operational efficiency. Proven success in collaborating with cross-functional partners to implement enterprise reporting systems, automate workflows, and convert intricate information into concise, high-impact insights for stakeholders.

CORE COMPETENCIES

Data Analysis and Reporting | SQL Analytics | Dashboard Development | Data Visualization | Business Intelligence | Requirements Translation | Stakeholder Communication | Data Validation and Quality Assurance | Process Improvement | Root Cause Analysis | Statistical Analysis | Agile Collaboration | SDLC Awareness | Cross Functional Data Support

EXPERIENCE – SECURITIES AMERICA / OSAIC

JUNE 2012 – OCTOBER 2025

Data Scientist | September 2024 – February 2025

- Delivered strategic analytical and statistical support alongside Scrum Master responsibilities, strengthening project decisions and accelerating operational effectiveness.
- Engineered predictive and operational models, validated complex logic, and secured precise, reliable reporting for cross-functional teams.
- Leveraged Python and R to perform in-depth exploratory analysis, uncovering critical statistical patterns and enabling informed business actions.
- Performed targeted SQL validation checks to verify the accuracy of analytical outputs, providing dependable insights for business decision-making.
- Documented field logic, metric definitions, and data transformation procedures, establishing standardized workflows while preserving consistency and reliability across datasets.
- Analyzed data structures to detect gaps, inconsistencies, and areas requiring clarification, bolstering overall dataset accuracy and usability.
- Produced targeted analytical reports for leadership and cross-functional teams, supporting informed decision-making and improving strategic insights.

Senior Data Project Analyst | June 2012 – September 2024

- Executed analytics, reporting, and data validation across technology, operations, compliance, supervision, and new accounts, yielding actionable insights for enterprise decision-making.
- Constructed dashboards, authored SQL queries, verified dataset integrity, and documented workflows, securing accurate reporting and compliance with regulatory standards.
- Developed Power BI and Tableau dashboards, exposing operational performance and translating metrics into concrete business decisions.
- Devised an enterprise service support dashboard, reducing ticket volume, lowering outstanding issues, and shortening processing times across the organization.
- Crafted data models and reporting layers based on data warehouse principles, producing reliable, consistent reporting outputs for enterprise use.
- Examined workflows to identify inefficiencies and implemented recommendations, achieving higher reporting quality and streamlined operational processes.
- Mentored analysts on SQL architecture, reporting logic, and dashboard design methods, expanding team technical proficiency and improving analytical capabilities.
- Carried out SQL analysis on relational databases and data warehouse environments, identifying anomalies, validating logic, and producing error-free operational reports.

- Recorded business requirements, workflows, field logic, and metric definitions, standardizing processes and enabling clear, consistent guidance for downstream teams.
- Created structured training materials and guided users through the new servicing ticket system, promoting accurate execution of workflows and consistent use of new features.
- Conducted data mapping, validation, and new account imports, creating training resources and supporting seamless system transitions without disruptions.
- Collaborated with Compliance, Operations, New Accounts, ETL, QA, and technical teams, resolving cross-system discrepancies and safeguarding data integrity across platforms.
- Eliminated reliance on a third-party vendor by independently retrieving, formatting, and validating quarterly regulatory documents, generating approximately \$100,000 in annual cost savings.
- Consolidated datasets for quarterly regulatory financial reporting, conducted client verifications, guided UAT and system upgrade testing, and provided leadership with accurate, actionable reports for decision-making.
- Performed ad hoc data investigations to identify anomalies, validate reporting logic, and improve overall dataset reliability for business stakeholders.
- Partnered with business users to refine reporting requirements and translate analytical findings into clear actionable recommendations.

Scrum Master | December 2023 – October 2025

- Directed Agile initiatives across multiple teams by coordinating ceremonies and improving collaboration, achieving stronger alignment between product, engineering, and business functions.
- Guided a newly formed team through full Agile adoption, enhancing delivery speed and effectiveness for digital and data-driven projects.
- Oversaw sprint planning, daily standups, backlog refinements, reviews, and retrospectives, increasing team clarity, engagement, and operational performance.
- Trained team members in Agile methodologies, enabling the adoption of consistent, sustainable practices and improving overall workflow efficiency.
- Formed a new Agile team by instructing foundational concepts and facilitating initial ceremonies, fostering confidence and shared comprehension among members.
- Managed Azure DevOps boards and dashboards, increasing visibility into project progress, identifying risks early, and monitoring team performance metrics.
- Transformed broad feature scopes into actionable stories, improving flow and preventing delivery slowdowns.
- Eliminated project obstacles by collaborating with leadership, engineering teams, and support units, improving workflow efficiency and delivery speed.
- Partnered with Product Owners to prioritize, clarify, and align user stories with strategic business objectives, enhancing project focus and value.
- Facilitated continuous improvement initiatives through structured retrospectives and analysis of performance metrics, advancing team productivity and process quality.
- Reinforced and optimized communication channels among technical and business partners, driving consistent alignment and accelerating collaborative decision-making.
- Assumed the Release Train Engineer role as required, enabling uninterrupted program execution and guaranteeing complete accuracy across all delivery dashboards.
- Worked closely with compliance, operations, and support teams, clarifying objectives and ensuring deadlines and expectations were rigorously met.
- Translated complex business needs into data models, reporting frameworks, and analytics solutions, empowering multiple departments with actionable, strategic insights.
- Produced accurate and organized documentation, strengthening shared understanding of working agreements and expectations.

EDUCATION & CERTIFICATIONS

Master of Science in Project Management | Bellevue University | Estimated Graduation January 2027

Master of Science in Data Science | Bellevue University | November 2023

SAFe 6 Certification | December 2023

TECHNICAL SKILLS

SQL | Python | R | Snowflake | SQL Server | Sybase ASE | Power BI | Tableau | ETL Development | Metadata Management | Azure DevOps | Microsoft Office | Visio
